Qompass AI Dotfiles

XDG-compliant configuration files for the Qompass AI development environment

Overview

All configs follow X Desktop Group (XDG) convention `$XDG_CONFIG_HOME` (`~/.config`)

- A — Audio, Automation & Access
 - alsa — ALSA audio device configuration
 - alsactrol — ALSA mixer control
 - amsynth — Software synthesizer
 - ansible-bundler — Ansible automation bundler
 - apparmor — AppArmor MAC security profiles
 - appimagelauncher — AppImage integration
 - aria2 — Lightweight download utility
 - arrrpc — Discord Rich Presence bridge
 - arti — Rust Tor implementation
 - astro — Astronvim configuration
 - audacity — Audio editor
- B — Builds, Browsers & Bluetooth
 - bacon — Background Rust code checker
 - bash — Bash shell configuration
 - basedpyright — Python type checker (fork)

bemenu — Dynamic menu library

biome — JS/TS/JSON toolchain

bluetooth — BlueZ Bluetooth daemon config

bob — Neovim version manager

btcp — Resource monitor

burp — Network backup client

byobu — Terminal multiplexer

```
export BTCP_CONFIG="$XDG_CONFIG_HOME/btcp/btcp.conf"
```

C — Containers, Compilers & CLI Tools

caddy — Caddy web server

cargo — Rust package manager

cava — Console audio visualizer

clamav — Antivirus engine

containers — Podman/Docker container config

couchdb — CouchDB document store

cuda — NVIDIA CUDA toolkit config

```
export CARGO_HOME="$XDG_DATA_HOME/cargo"
```

```
export RUSTUP_HOME="$XDG_DATA_HOME/rustup"
```

D — DNS, Databases & Display

dbeaver — Universal database tool

dbus-1 — D-Bus system/session bus config

discord-irc — Discord IRC bridge

discordo — Terminal Discord client

docker — Docker container engine

dnscrypt-proxy — Encrypted DNS proxy

dnsmasq — Lightweight DNS/DHCP server

dunst — Notification daemon

dxvk — DirectX-to-Vulkan translation

```
sudo cp /etc/dnscrypt-proxy/dnscrypt-proxy.toml "$XDG_CONFIG_HOME/dnscrypt-proxy/dnscrypt-proxy.toml"
```

E — Editors, Environment & Effects

easyeffects — PipeWire audio effects

editorconfig — Cross-editor coding style

efm-langserver — General LSP for linters

environment.d — systemd user environment

eslint — JavaScript/TypeScript linter

```
cat "$XDG_CONFIG_HOME/environment.d/xdg.conf"
```

F — Fonts, Fish & File Managers

fastfetch — Fast system info fetcher

fcitx5 — Input method framework

ffmpeg — Multimedia framework config

firejail — Security sandbox

fish — Fish shell configuration

fontconfig — Font rendering config

foot — Fast Wayland terminal

fuzzel — Application launcher (Wayland)

fwupd — Firmware update daemon

```
"$XDG_CONFIG_HOME/fish/config.fish"
```

G — Git, GTK & GPU

gamescope — Steam session compositor

git — Git VCS config and hooks

githooks — Global git hook scripts

github — GitHub CLI and token config

gnupg — GPG keyring config

godot — Godot game engine

greetd — Minimal display manager

gtk-2.0 / gtk-3.0 / gtk-4.0 — GTK theming

```
export GIT_CONFIG_GLOBAL="$XDG_CONFIG_HOME/git/config"
```

H — Hyprland, Hotplug & Hardening

haproxy — High-availability load balancer

hostapd — IEEE 802.11 AP daemon

hotplug — Device hotplug rules

hyprmon — Hyprland monitor management

```
"$XDG_CONFIG_HOME/hypr/hyprland.conf"
```

I — Input, IPC & Infrastructure

input — libinput device configuration

input-remapper — Key/button remapping

inputplumber — Unified input management

inspired — IRC server daemon

intel — Intel GPU config

ipython — Interactive Python config

irssi — Terminal IRC client

iwd — Intel wireless daemon

```
# iwd XDG config
export IWD_CONF_DIR="$XDG_CONFIG_HOME/iwd"
```

J-K — Julia, Jupyter & KDE

jellyfin — Media server

jj — Jujutsu VCS config

julia — Julia language config

jupyter — Jupyter notebooks config

khal — Terminal calendar client

kitty — GPU-accelerated terminal

krita — Digital painting studio

kvantum — Qt5/Qt6 SVG theme engine

L — Lua, LSP & Logging

libao — Audio output library config

llm — LLM CLI tool config

loki — Log aggregation (Grafana Loki)

lua — Lua interpreter config

luacheck — Lua static analyzer

luarocks — Lua package manager

lynx — Terminal web browser

```
export LUAROCKS_CONFIG="$XDG_CONFIG_HOME/luarocks/config.lua"
```

M — Mail, Monitoring & Media

mako — Lightweight Wayland notification daemon

marksman — Markdown LSP server

matplotlib — Python plotting library

meiliseach — Fast search engine

mise — Polyglot runtime manager

monit — System/process monitoring

mosquitto — MQTT broker

mpv — Media player

msmtp — SMTP client

mumble — VoIP client

```
export MSMTP_CONFIG="$XDG_CONFIG_HOME/msmtp/config"
```

N — Neovim, Networking & Nix

nano — GNU nano editor

neomutt — Terminal email client

netctl — Profile-based network manager

netdata — Real-time performance monitoring

nftables — Linux firewall ruleset

niri — Scrollable-tiling Wayland compositor

nixpkgs — Nix user package config

notmuch — Fast mail indexer

npm — Node package manager config

nvidia — NVIDIA driver config

nwg-displays — Wayland display manager GUI

```
npm config set cache "$XDG_CACHE_HOME/npm"
```

```
npm config set prefix "$XDG_DATA_HOME/npm"
```

O-P — OpenVPN, Pacman & Pipewire

obs-studio — Streaming and recording

offlineimap — IMAP mail sync

onionshare — Anonymous file sharing

openrazer — Razer peripheral driver
openvpn — VPN daemon config
pacman — Arch Linux package manager
pacman.d — pacman drop-in configs
`ls "$XDG_CONFIG_HOME/pacman.d/"`
P (continued) — Pipewire, Postfix & Proxies
pacoloco — Pacman repository proxy
pacredir — Pacman traffic redirector
pacserve — Share pacman packages on LAN
pamac — GUI package manager
pam.d — PAM authentication modules
pam-exec-oauth2 — OAuth2 PAM module
pandoc — Universal document converter
pango — Text layout and rendering
paru — AUR helper config
pavucontrol-qt — Qt PulseAudio volume control
pgbouncer — PostgreSQL connection pooler
pgmodeler — PostgreSQL data modeler
photoprism — AI-powered photo management
php / php84 — PHP interpreter config
picom — X11 compositor
pico-tts — SVOX Pico TTS engine
pip — Python package installer
piper-tts — Local neural TTS
pipewire — Low-latency audio/video server
pipewire.conf.d — PipeWire drop-in configs
pixi — Conda-based package manager
plymouth — Boot splash screen
pnpm — Fast Node.js package manager
polkit-1 — Privilege authorization framework
polybar — Status bar

postfix — SMTP mail transfer agent

postfix-mysql — Postfix MySQL lookups

postfix-psql — Postfix PostgreSQL lookups

postfix-sqlite — Postfix SQLite lookups

powerdns — Authoritative DNS server

powershell — PowerShell Core config

proxychains — Proxy chain config

pulse — PulseAudio client config

pytest — Python testing framework

```
export PIPEWIRE_CONFIG_DIR="$XDG_CONFIG_HOME/pipewire"
export PIP_CONFIG_FILE="$XDG_CONFIG_HOME/pip/pip.conf"
export PIP_CACHE_DIR="$XDG_CACHE_HOME/pip"
```

Q — QEMU, Qt & Qutebrowser

qemu — QEMU machine emulator config

qt5ct — Qt5 appearance config

qt6ct — Qt6 appearance config

qutebrowser — Keyboard-driven browser

```
export QT_QPA_PLATFORMTHEME=qt6ct
export QT_STYLE_OVERRIDE=kvantum
```

R — Redis, Rust & Remote Tools

r — R language config

radvd — IPv6 router advertisement daemon

redis — In-memory data store

redsocks2 — Transparent SOCKS redirector

rkhunter — Rootkit hunter config

ruff — Fast Python linter/formatter

rygel — UPnP/DLNA media server

```
export RUFF_CONFIG="$XDG_CONFIG_HOME/ruff/ruff.toml"
```

S — Security, SSH, Samba & Syncthing

samba — SMB/CIFS file sharing

sanoid — ZFS snapshot manager

sass — CSS preprocessor

sccache — Compiler cache (Rust/C/C++)
 searchsploit — ExploitDB CLI
 selene — Lua linter
 shadowsocks-rust — Encrypted proxy protocol
 shellcheck — Shell script static analysis
 signal — Signal desktop messenger
 smartdns — High-performance DNS server
 softsm2 — Software HSM implementation
 soju — IRC bouncer
 speech-dispatcher — Speech synthesis interface
 ssh — OpenSSH client config
 sshguard — SSH brute-force protection
 sshuttle — VPN-over-SSH tunnel
 sssd — System security services daemon
 stalwart-mail — Modern mail server
 steam — Steam gaming client
 strongswan — IPsec VPN
 stunnel — SSL/TLS tunneling
 subversion — SVN version control
 supermaven — AI code completion
 sway — Wayland i3-compatible compositor
 syncthing — Continuous file synchronization
 systemd — systemd user units and config
`export SSH_CONFIG="$XDG_CONFIG_HOME/ssh/config"`
`alias ssh='ssh -F "$XDG_CONFIG_HOME/ssh/config"'`

`export SCCACHE_DIR="$XDG_CACHE_HOME/sccache"`
 T — Tailscale, Tmux, Tor & Traefik
 tailscale — WireGuard-based mesh VPN
 tailwind — Tailwind CSS config
 taplo — TOML LSP and formatter
 tarantool — In-memory database

tenacity — Audacity fork audio editor

texlive — LaTeX distribution config

timeshift — System restore utility

thunar — XFCE file manager

tlp — Linux power management

tmux — Terminal multiplexer

tombi — TOML language toolchain

tor — Tor anonymity network

torbrowser — Tor Browser config

traefik — Cloud-native reverse proxy

tree-sitter — Incremental parsing library

```
export TMUX_CONFIG="$XDG_CONFIG_HOME/tmux/tmux.conf"
# source-file $XDG_CONFIG_HOME/tmux/tmux.conf
```

U — udev, UFW, Unbound & usbguard

udev — Device event management rules

udisks2 — Disk management daemon

ufw — Uncomplicated firewall

unbound — Validating DNS resolver

unbound/unbound.conf — Main resolver config

unbound/rpz — Response Policy Zones

upower — Power device daemon

uptime-kuma — Self-hosted uptime monitor

usbguard — USB device authorization

uwsgi — WSGI application server

uwsm — Universal Wayland session manager

```
bash "$XDG_CONFIG_HOME/unbound/clearnet.sh"
bash "$XDG_CONFIG_HOME/unbound/rotate.sh"
```

V — Vault, Virt, VLC & VPN

v2ray — Universal proxy platform

vagrant — VM environment manager

vale — Prose linter

valkey — Redis-compatible key-value store

vault — HashiCorp secrets manager

vaultwarden — Self-hosted Bitwarden server

vcpkg — C/C++ package manager

vectorcode — Codebase vector search tool

vencord — Discord client mod

vfio-kvm — GPU passthrough config

vkBasalt — Vulkan post-processing layer

vlc — VLC media player

vpnc — Cisco VPN client

vsftpd — Very secure FTP daemon

```
export VAULT_CONFIG_PATH="$XDG_CONFIG_HOME/vault/vault.hcl"
```

W — Waybar, Wireplumber & Wayland

wallust — Color scheme generator from wallpapers

waybar — Wayland bar for Sway/Hyprland

waypaper — Wallpaper manager GUI

webhook — Lightweight webhook server

wget — GNU wget config

wifite — Automated wireless auditor

wiremix — PipeWire TUI mixer

wireplumber — PipeWire session manager

wireshark — Network protocol analyzer

wlogout — Wayland logout menu

wofi — Wayland application launcher

```
export WGETRC="$XDG_CONFIG_HOME/wget/wgetrc"
```

X — XDG, X11 & XFCE

x11 — X Window System config

xdg — XDG user dirs and MIME config

xdg-desktop-portal — Flatpak portal config

xdg-ninja — XDG compliance checker config

xdg-terminal-exec — Default terminal config

xfce4 — XFCE desktop environment

xkbsel — XKB keyboard layout selector

xmake — Lua-based build system

```
"$XDG_CONFIG_HOME/user-dirs.dirs"
"$XDG_CONFIG_HOME/user-dirs.locale"
```

Y — YAML, Yay & YARA

yamlls — YAML language server

yara — Malware classification rules

yay — AUR helper (Yet Another Yogurt)

```
export YAY_CONFIG="$XDG_CONFIG_HOME/yay/config.json"
```

Z — Zed, Zig, ZLS & Zotero

zabbix — Enterprise monitoring platform

zed — High-performance code editor

zfsbootmenu — ZFS boot environment manager

zig — Zig language toolchain config

zigbee2mqtt — Zigbee to MQTT bridge

zls — Zig language server

zotero-translation-server — Zotero web translator

```
# ZLS config path
export ZLS_CONFIG_PATH="$XDG_CONFIG_HOME/zls/zls.json"

# Zig global cache
export ZIG_GLOBAL_CACHE_DIR="$XDG_CACHE_HOME/zig"
```

XDG Base Directory Compliance

All configs follow the XDG Base Directory Specification:

Variable	Default	Purpose
<code>\$XDG_CONFIG_HOME</code>	<code>~/.config</code>	User config files
<code>\$XDG_DATA_HOME</code>	<code>~/.local/share</code>	User data files
<code>\$XDG_CACHE_HOME</code>	<code>~/.cache</code>	Non-essential cached data
<code>\$XDG_STATE_HOME</code>	<code>~/.local/state</code>	Persistent state data
<code>\$XDG_RUNTIME_DIR</code>	<code>/run/user/\$UID</code>	Runtime/socket files
